## DETAILED ACTION

### *Specification*

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 13-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown (US 6,606,856) in view of CA 2388065.

Brown teaches a diesel fuel composition comprising ultra low sulfur diesel fuel and a fuel soluble product (see abstract; col. 2, lines 47-53). The fuel soluble product may be the same as set forth in claim 13(i), 14(g) and 15-21 (see col. 5, lines 61-67; col. 7, lines 25-65; col. 8, lines 31-52; col. 11, lines 2-10). Brown fails to teach that his fuel composition comprises a partially or completely neutralized fatty acid (component (ii) of the present claims). However, CA teaches this limitation.

CA teaches adding to diesel fuel fatty acid salts of alkoxylated oligoamines that encompass the neutralized fatty acids of the present claims (see abstract).

It would have been obvious to one of ordinary skill in the art to include the salts of CA because Brown teaches that other diesel fuel additives which are well known to

those of skill in the art, such as lubricants, may be used in the ultra low sulfur diesel fuel composition and CA teaches that this salts improve the lubricity properties of diesel fuel compositions. The skilled artisan would recognize the need to add a lubricant to ULSD because it is well known in the art that the removal of sulfur from diesel fuels affects the lubricity of the fuel.
